Senior Software Engineer | Python | FastAPI | Django | AWS | Generative AI

PROFESSIONAL SYNOPSIS

- Senior Software Engineer with **6+ years of experience** specializing in **Python backend development**, building scalable, high-performance systems using **Django, FastAPI, and Django REST Framework (DRF)**. Strong expertise in designing and developing **RESTful APIs, microservices, and distributed systems**, with a focus on scalability, performance, and clean architecture.
- Proven track record of **owning end-to-end feature development**, including system design, API development, database modeling, and production deployment. Experienced in optimizing backend systems using **PostgreSQL, MySQL, Redis, and Celery**, with deep knowledge of query optimization, caching strategies, and third-party integrations.
- Hands-on experience with **cloud-native development on AWS (EC2, S3, Lambda, RDS)** and implementing **CI/CD pipelines using Docker, Jenkins, and GitHub**. Experienced in **Agile (Scrum)** environments, production debugging, system reliability, code reviews, technical discussions, and mentoring, with a focus on building robust, maintainable, and production-grade systems.
- Expanding expertise in **Generative AI (GenAI)** and **AI Engineering**, with hands-on experience exploring **Agentic AI, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), Large Language Models (LLMs)**, and **Prompt Engineering**. Experienced in leveraging **GitHub Copilot, Cursor, and Claude** to enhance software development productivity, implement structured output generation, and integrate AI-driven capabilities into backend systems and intelligent workflows.

ACADEMIC PROFILE

- Bachelor of Technology in Mechanical Engineering**
Jawaharlal Nehru Technological University, 2016 - secured 74%.

EXPERIENCE SUMMARY

- Working as Senior Software Engineer at **Epam Systems Inc** from Dec 2025 to present.
- Worked as Senior Software Engineer at **Side Inc, India** from July 2023 to Dec 2025.
- Worked as Software Development Engineer II at **Tijori Financial Services Pvt Ltd** from January 2022 to July 2023.
- Worked as Software Engineer at **Robert Bosch Engineering & Business Solutions** from November 2019 to December 2021.

CERTIFICATIONS & CREDENTIALS

- Claude Certified Architect - Foundations | Anthropic**
Credential: https://www.credly.com/badges/310d4094-3443-477e-9868-22efac55bb5a/public_url

TECHNICAL SKILLS

Programming & Frameworks	:	Python, Django, Django REST Framework, FastAPI
Databases & Cloud	:	PostgreSQL, MySQL, AWS (EC2, S3, Lambda, RDS, ELB)
AI & Generative AI	:	Generative AI (GenAI), LLMs, Agentic AI, MCP, RAG, Prompt Engineering, AI Agents
AI Tools	:	Claude, Claude API, GitHub Copilot, Cursor, LangChain
DevOps & Backend Tools	:	Docker, Jenkins, GitHub Actions, Redis, Celery, SonarQube, Postman
Development Tools	:	VS Code, PyCharm, tmux
Version Control & Management	:	Git, GitHub, Bitbucket, Jira
Web & OS	:	HTML, CSS, JSON, Linux, Windows

PROJECTS

Project - 1: Omega -- Order-to-Cash (OTC)

Client : Procter & Gamble (P&G).

Tech Stack : Python, FastAPI, MySQL, GenAI, PostgreSQL, SQLAlchemy, Azure Event Hub, Docker, Git, GitHub, Linux, JIRA, Postman.

Description:

Omega is a backend API for Order-to-Cash (OTC) operations: sales orders, delivery blocks, outline initiatives, planning cases, and integration with SAP-style source data, Blue Prism automation, Case Manager, and configuration services. It exposes REST APIs for operations and user workflows, runs ETL-style data loaders from reporting databases into PostgreSQL, and uses an event-driven outbox pattern for reliable side effects and downstream processing. The platform supports audited persistence, correlation-aware HTTP clients, and background workflows and consumers for scale-out processing.

Key Contributions:

- Designed and implemented **scalable REST APIs** using **FastAPI** with clear separation of concerns (controller → service → domain), improving maintainability and extensibility.
- Built **event-driven architecture using outbox pattern and Azure Event Hub**, ensuring reliable processing and fault-tolerant downstream integrations.
- Designed and optimized **PostgreSQL schema with Alembic migrations and implemented asynchronous processing using SQL Alchemy**, improving query performance, throughput and response latency.
- Developed **ETL-style data loaders and batch workflows** to efficiently synchronize data from SQL Server (SAP RTDS) and Blue Prism systems.
- Integrated external systems including case management, configuration services, SAP APIs, and **GenAI-powered** workflows for intelligent backend capabilities and automated communication.
- Wrote **unit and integration tests using pytest**, participated in **code reviews**, and collaborated on API contracts and system design to maintain **code quality** and consistency across services.
- Diagnosed and resolved production issues involving database connectivity, worker processes, and event handling, improving system stability and reliability.

Project - 2: Side-WFM

Client : Side Inc.

Tech Stack : Python, FastAPI, MySQL, AWS, Git, Bit Bucket, Jira, Postman.

Description:

Side-WFM (Work Force Management) is an internal enterprise tool used across multiple geographies by Side. It includes sub modules like attendance management, leave management and daily activity logging. This system streamlines employee workflows and ensures efficient workforce operations.

Key Contributions:

- Designed and developed **high-performance REST APIs using FastAPI**, improving backend responsiveness and scalability.
- Collaborated with product managers to **translate business requirements into technical solutions**, ensuring alignment with product goals.
- Built APIs supporting **attendance, leave, and activity workflows**, improving operational efficiency across teams.
- Optimized database interactions and queries, improving **API response times and system performance**.
- Worked closely with frontend teams to ensure **seamless API integration and consistent data flow**.
- Conducted unit testing and participated in **code reviews**, improving code quality and reducing defects.
- Actively contributed to Agile ceremonies, improving sprint delivery and team collaboration.

Project - 3: Tijori Finance

Client : Tijori Financial Services Pvt Ltd.

Tech Stack : Python, Django, DRF, React JS, PostgreSQL, Git, GitHub, AWS, Linux, Redis and Sentry, numpy and pandas.

Description:

Tijori Finance is a market research platform that provides in-depth data on market share, revenue breakdown, location exposure, shareholding, and financials of companies. It helps long-term investors make informed investment decisions by offering detailed insights into companies and sectors. Key features include real-time market updates via a timeline and a portfolio tracker to monitor investments.

Key Contributions:

- **Led end-to-end development of the Portfolio module**, enabling users to track and analyze investment performance.
- Designed scalable **database schemas and REST APIs using Django REST Framework** to support financial analytics.
- Improved performance using **query optimization and Redis caching**, reducing data retrieval latency.
- Collaborated with frontend teams to ensure **accurate data representation and seamless user experience**.
- Implemented financial data processing using **NumPy and Pandas** for analytics workflows.
- Diagnosed and fixed production issues, improving system stability and user experience.
- Reviewed pull requests and contributed to maintaining **high code quality standards**.
- Reduced AWS CloudWatch logging costs by **~40%** by auditing log ingestion patterns, implementing level-based logging (error-focused), and minimizing unnecessary high-volume logs while maintaining production observability.

Project - 4: SITE Postal

Client : Saudi Information Technology Company (SITE).

Tech Stack : Python, Django, PostgreSQL, DRF, Git, Bit bucket, JIRA, SonarQube and Sentry.

Description:

SITE Postal is a secure and customizable e-correspondence management system designed to comply with Saudi Arabia's correspondence standards while seamlessly integrating with an organization's workflow. It automates document management to enhance efficiency, improve productivity, and optimize resource utilization while ensuring data security and compliance.

Key Contributions:

- Gathered and analyzed requirements directly from stakeholders to align technical solutions with business needs.
- Designed and developed **core backend features using Django and DRF**, improving system performance and scalability.
- Implemented secure document workflows ensuring **data integrity and compliance requirements**.
- Participated in architectural discussions to build **scalable and maintainable solutions**.
- Conducted code reviews and contributed to improving **code quality and development standards**.
- Collaborated in Agile processes to enhance delivery efficiency and product quality.
